

Cleaning and maintenance of M-Line and M-Line Plus

The M-Line and M-Line Plus wash unit systems are manufactured from »MINERALSTAHL« (composite material, fibre reinforced) and are very easy to clean.

Instructions and recommendations for this are listed below:

- For daily cleaning, we recommend the use of normal household cleaning liquids only and *the complete avoidance of all liquids and materials containing abrasive agents.*
- After every cleaning, the unit should be rinsed with hot water and rubbed dry.
- Limescale and strongly coloured stains should be removed using lightly diluted household vinegar or, in more stubborn cases, limescale remover.
- Although strongly coloured liquids will not penetrate the surface, we still recommend its immediate rinsing and cleaning.
- The material is resistant against nearly all normal household chemicals, but we advise that, should these come into contact with the surface, they be rinsed off immediately.

Subject to technical modifications in so far as these serve the further development of the products. Last amended 03/08.
